

ABSTRACT

Methods and systems for making booklets are described. In one embodiment, software enables a user to browse to a network-accessible (e.g. 5 Web-accessible) booklet-making service. The user can specify, to the booklet-making service, imaging data that is to be used to make a booklet and how that imaging data is to be used. The booklet-making service can then construct a booklet incorporating the imaging data that was specified by the user. In further embodiments, the user can print and/or save their booklet.
